

Eaton-Williams Service

Air Conditioning, Heating and Ventilation Specialists

Commitment

Jaguar Cars.

Buckingham Palace.

British Telecom.

*Committed to quality of service,
reliability and technical excellence.*

Eaton-Williams Service (EWS) provides maintenance for heating, ventilating and air conditioning equipment. We are acknowledged as one of the leading specialist service companies in the field.

We take care with any new maintenance contract to ensure that our service is tailored to reflect the equipment being maintained and its practicality in relation to how the site is operated.

Each contract is backed up by our standard emergency service call out facility offering around the clock cover every day of the year.

Response times can be arranged subject to location and contractual requirements. Whatever the agreement, it takes one Freephone call

to our 24 hour Help Desk to get the service you need.

All EWS engineers are fully trained professionals with experience of a broad range of equipment. Our overall service has been shaped by the need to maintain HEVAC plant in a large number of the country's essential service providers such as banks, building societies, hospitals and the telecommunications industry.

Service extends beyond the maintenance of plant and equipment. For contract customers EWS will undertake to refurbish and replace equipment. Whether it be to replace CFC's in existing refrigeration plant or to design, install and commission a new installation, it is all part of the service to our customers.

Keeping equipment operating reliably depends upon rapid access to the right spare parts. We manage this through a combination of site held spares, our central stores and a comprehensive van stock held by each of our mobile engineers. Overlaying all these arrangements the close links with our key suppliers ensures rapid response whenever the need arises.

Our single most important asset is our team of engineers. We take particular pride in our engineers who are not only highly-skilled but have a total commitment to the customer. All engineers are actively encouraged to update their skills with regular training. EWS was one of the first companies to sign up for the Investors in People Award.

As we have long recognised that the secret to keeping our customers satisfied is regular liaison, our service managers maintain close links so that any issues that might become a problem are recognised and addressed.

*On call 24 hours per day
365 days a year.*

EWS engineers are strategically based throughout the U.K. and equipped to provide both routine and emergency service to all our customers, enabling us to provide national maintenance contracts. To ensure a quick response in emergencies our team of engineers operate a rota system so making sure there are engineers on call 24 hours a day, every day of the year.

Our aim at all times is to respond to emergencies within four hours — unless, of course, it is a site where we have contracted to be there even quicker.

Residential

Cable & Wireless.

Residential engineers. Building services maintenance.

Increasingly large commercial premises need residential engineers to ensure optimum operating efficiency. EWS have long experience of providing and managing residential service engineers. One of our keys to success in this area is that we take great care to ensure that the skills of our engineers match the site requirements. Of particular importance is our ability to support each of our residential engineers with our mobile service engineers when any unforeseen problems such as sickness arises. You can count on EWS to always have an engineer available to provide service whatever happens.

And our service does not just stop at maintaining HEVAC equipment. We can undertake to outsource and manage specialist service support functions, such as generators, UPS systems, water treatment, fire alarm systems and all other building services, freeing-up clients to focus on their core business activities.

M&E Services

Design, installation and commissioning. Refurbishment. CFC and HCFC recovery and substitution.

Eaton-Williams Service are specialists in design, installation and maintenance of all types of heating, ventilation and air conditioning.

As part of our commitment to our clients, we will undertake comprehensive installation works, ranging from close control systems in areas such as computer rooms, test laboratories, clean rooms and operating theatres through to comfort cooling equipment.

We install a full range of humidification, heating, ventilation and air conditioning equipment manufactured by our sister companies, Vapac, Edenaire, Qualitair and Moducel. If our own products do not meet the specified requirements, then we can call upon other manufacturers equipment.

Summary

Committed to quality, reliability and technical excellence.

- § Heating
